Anas Elgarhy

Systems & Backend Software Engineer

career@thatsillyman.win | linkedin.com/in/0x61nas | github.com/0x61nas | thatsillyman.win

Summary

Systems-oriented software engineer specializing in high-performance backend systems and low-level programming. Experienced in building reliable infrastructure using Rust, C/C++, and Java across Linux environments. Strong background in API design, distributed systems, and performance optimization. Active open-source contributor and maintainer with a passion for efficient, transparent software systems.

Education

Egyptian E-Learning University — Dokki, Egypt
Bachelor of Information Technology — *Jul. 2020 – Aug. 2024*

Beni-Suef University — Beni-Suef, Egypt
Bachelor of Computer Science — *Oct. 2020 – Aug. 2024*

Experience

Software Developer — Nov 2024 – Present
Raya Information Technology — *6th of October City, Egypt*
Developed and maintained the Transaction Middleware handling millions of transactions daily for our banking clients using Jakarta EE with state-of-the-art financing technology, and collaborated directly with clients to deliver prompt support, critical bug fixes, and feature enhancements.

Software Engineer (Intern) — May 2023 – Dec 2023
Dragons Bootcamp LLC — *Wyoming, United States (Remote)*
Assisted in developing the roadmap for Java-based backend programs, aligning with project goals and timelines.

Projects

Qt WASM Docker: *Qt WASM builder Docker images for building complex Qt WebAssembly applications.*
Luna: *Peaceful web browser for the engineering minds.*
Reiko: *Java byte-code decompiler.*
Akame: *Simple and reliable backend framework in Rust.*
Aarty: *Mini framework in Rust to render images in the terminals/ttys.*
Lqth: *Simple but blazingly fast screenshot utility.*
Todo2: *The todo comment for serious software engineers.*
Ayah: *Plugin for IntelliJ platform that displays verses from the Qur'an to Muslim developers.*
Jqca: *Simple java wrapper library for alquran-cloud API.*
Jls: *Modern alternative to GNU/ls utility.*
Jpwd: *Modern alternative to GNU/pwd utility.*
JColorfulConsole: *Write a colorful text to the tty in Java.*
Pinterest-login: *Login to Pinterest from rust code without using their API.*

Skills

Languages: Zig, Rust, C, C++, Java, Python, SQL (Postgres), Bash, Lua, Intel assembly, Java Script
Frameworks: Actix, Rocket, PyO3, JUnit, FastAPI, Spring Boot, Lombok, Yew, JPA, HTMX, Jackson, Image-rs, Serde, Clap, OpenGL, raylib, SOAP, Jakarta EE
Tools: Git, Cargo, Nix, Maven, Postgres, Just, GDB, LaTeX, Make, QEMU, Docker, GitHub, GitHub Actions, GitLab, Vim, Helix, Z-Shell, Neovim, Tmux, Arch Linux, NixOS, PyCharm, IntelliJ, Cachix, HTML, CSS, GCP, Ubuntu, Debian, SSH, Sqlite, Clang, GCC, NASM, FASM, GnuPG, FFMPEG, farbfeld, Wireshark, Recaf, JBoss, PlantUML, LLDB, Minikube, Kubernetes, Jenkins, ArgoCD, Prometheus, Grafana, Nexus

Volunteering

Open Source Developer Jan 2017 – Present
github.com/0x61nas *Hybrid*
Active contributor to open-source ecosystems with multiple maintained projects and developer tools.

Nixpkgs Maintainer Jun 2024 – Present
nixsoftware.org *Remote*
Maintainer of 50+ package in the official NixOS repository, ensuring build reliability and package updates.

AUR Package Maintainer Jun 2022 – Present
aur.archlinux.org *Remote*
Vendor and maintainer of 100+ package in Arch user repository.

Interests

Embedded Systems: Passionate about working as close to the hardware as possible. I dislike black-box systems.
Performance Optimization: Dedicated to building high-performance, lightweight software and constantly learning new techniques to maximize efficiency.
Programming Languages: Fascinated by exploring innovative ways to communicate with computers.
PCB Design: Enjoy designing custom PCBs for embedded and experimental hardware projects.
Reverse Engineering: Well... nothing is closed-source if you can read assembly ;)

Languages

English: Professional | **Arabic**: Native
