

ANAS ELGARHY

Systems & Backend Software Engineer

career@thatsillyman.win | linkedin.com/in/0x61nas | github.com/0x61nas | thatsillyman.win

SUMMARY

Systems-oriented software engineer specializing in high-performance backend systems and low-level programming. Experienced in building reliable infrastructure using Rust, C/C++, and Java across Linux environments. Strong background in API design, distributed systems, and performance optimization. Active open-source contributor and maintainer with a passion for efficient, transparent software systems.

EDUCATION

Egyptian E-Learning University

Bachelor of Information Technology

Dokki, Egypt

Jul. 2020 – Aug. 2024

Beni-Suef University

Bachelor of Computer Science

Beni-Suef, Egypt

Oct. 2020 – Aug. 2024

EXPERIENCE

Software Developer

Raya Information Technology

Nov 2024 – Present

6th of October City, Egypt

Developing and maintaining the Transaction Middleware for our banking clients using Jakarta EE and collaborated directly with banking clients to deliver prompt support, critical bug fixes, and feature enhancements.

Software Engineer

Dragons Bootcamp LLC

Apr 2024 – Nov 2024

Wyoming, United States (Remote)

Designed and implemented REST APIs using Rust with Actix framework and PostgreSQL to store data from learning management systems.

Software Engineer (Intern)

LevelUp ESG™

Apr 2024 – Jun 2024

City Of London, England, United Kingdom (Remote)

Designed the architecture for the PDF generation subsystem, improving document processing efficiency and laid out the foundation for performance optimization, resulting in improved system responsiveness.

Software Engineer (Intern)

Dragons Bootcamp LLC

May 2023 – Dec 2023

Wyoming, United States (Remote)

Assisted in developing the roadmap for Java-based backend programs, aligning with project goals and timelines.

PROJECTS

Akame: Simple and reliable backend framework in Rust.

Aarty: Mini framework in Rust to render images in the terminals/ttys.

Lqth: Simple but blazingly fast screenshot utility.

Todo2: The todo comment for serious software engineers.

Ayah: Plugin for IntelliJ platform that displays verses from the Qur'an to Muslim developers.

Jqca: Simple java wrapper library for alquran-cloud API.

Jls: Modern alternative to GNU/lis utility.

Jpwd: Modern alternative to GNU/pwd utility.

JColorfulConsole: Write a colorful text to the tty.

Pinterest-login: Login to Pinterest from rust code without using their API.

SKILLS

Languages: Zig, Rust, C, C++, Java, Python, SQL (Postgres), Bash, Lua, Intel assembly, Java Script

Frameworks: Actix, Rocket, PyO3, JUnit, FastAPI, Spring Boot, Lombok, Yew, JPA, HTMX, Jackson, Image-rs, Serde, Clap, OpenGL, raylib, SOAP, Jakarta EE

Tools: Git, Cargo, Nix, Maven, Postgres, Just, GDB, WtX, Make, QEMU, Docker, GitHub, GitHub Actions, GitLab, Vim, Helix, Z-Shell, Neovim, Tmux, Arch Linux, NixOS, PyCharm, IntelliJ, Cachix, HTML, CSS, GCP, Ubuntu, Debian, SSH, SQLite, Clang, GCC, NASM, FASM, GnuPG, FFMPEG, farbfeld, Wireshark, Recaf, JBoss, PlantUML, LLDB, Minikube, Kubernetes, Jenkins, ArgoCD, Prometheus, Grafana, Nexus

VOLUNTEERING

Open Source Developer <i>github.com/0x61nas</i> Active contributor to open-source ecosystems with multiple maintained projects and developer tools.	Jan 2017 – Present Hybrid
Nixpkgs Maintainer <i>nixsoftware.org</i> Maintainer of multiple packages in the official NixOS repository, ensuring build reliability and package updates.	Jun 2024 – Present Remote
AUR Package Maintainer <i>aur.archlinux.org</i> Vendor and maintainer of many packages in Arch user repository.	Jun 2022 – Present Remote

INTERESTS

- Embedded Systems:** Passionate about working as close to the hardware as possible. I dislike black-box systems.
- Performance Optimization:** Dedicated to building high-performance, lightweight software and constantly learning new techniques to maximize efficiency.
- Programming Languages:** Fascinated by exploring innovative ways to communicate with computers.
- PCB Design:** Enjoy designing custom PCBs for embedded and experimental hardware projects.
- Reverse Engineering:** Well... nothing is closed-source if you can read assembly ;)

LANGUAGES

English: Professional | **Arabic:** Native
